
MODEL 718

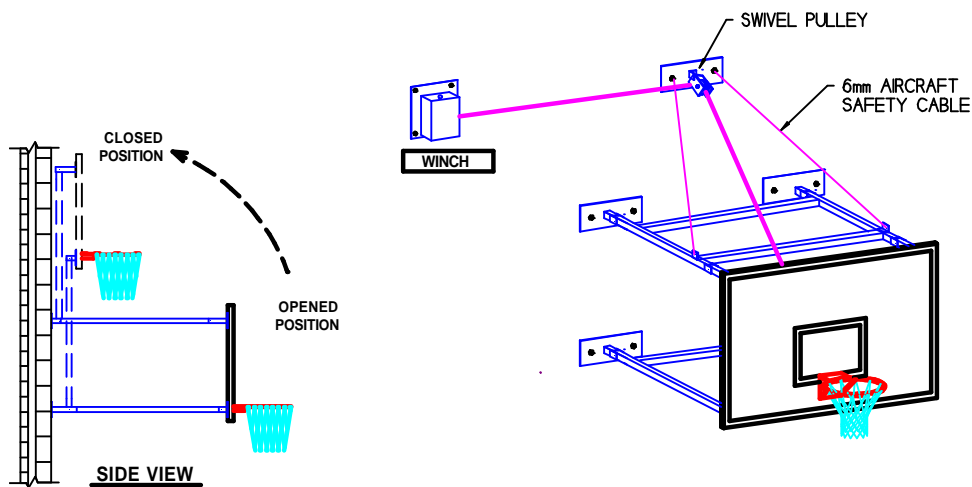

The Model 718 Ceiling Swing-up Basketball Backstop folds up in a compact position but extends out into the gymnasium.

The Model 718 is used specifically where an economical, stable unit is required.

The Model 718 is recommended for use where the ceiling or understructure of the trusses are above 16'-0" (4880mm) to 25'-0" (13716mm) in height.

MODEL 719

The Model 719 Wall Swing-up Basketball Backstop folds up in a compact position against the wall.

The Model 719 is used specifically where a folding unit is required and the wall structure can accommodate. Units cannot exceed 10'-0" (3050mm) in length.

The Model 719 is recommended for use where a fixed wall unit cannot be used due to the position of court lines
